Frage (öffentlich)

How do I transfer product variants from WooCommerce to marketplaces?

Lösung (öffentlich)

In general: In WooCommerce, created product attributes can be used as a basis for variants. To do
this, the product must be created as a "Variable Product".

WooCommerce offers two different options for creating product attributes:

Option 1: Create cross-product attributes

Attributes, which are available for all products, can be created under
WooCommerce -> Products ->
Attributes.

Option 2: Create product-specific attributes

Attributes that should only be available for a specific product can be created
under WooCommerce
-> Products -> Select product -> "Product attributes" tab.

Transfer product variants correctly to marketplaces

magnalister currently only supports the use of attributes that are not
specific to a particular
product (option 1). This means: Only variants created from cross-product
attributes can be
uploaded to marketplaces.

Important note:

If you have created product specific attributes (option 2), they cannot be
selected by magnalister.
During the product or variant upload an error message is displayed (see
magnalister Error Log).
Instead, remove the product-specific attributes and create them as
cross-product attributes under
Products -> Attributes. You can now select these by dropdown in the respective
WooCommerce
product in the tab "Product attributes".
